NASA Technical Reports Server (NTRS) 19830024247: Interior Operational military helicopter interior noise and vibration Operational military helicopter interior noise and vibration measurements with comparisons to ride quality criteria. Author and Affiliation: **Interior noise and vibration measurements on operational military** The results of physical measurements of the interior noise and vibration obtained within eight measurements on operational military helicopters and comparisons with various ride quality criteria The A weighted noise levels were compared to the NASA annoyance criteria, and the overall noise **Interior Noise and Vibration Measurements on Operational Military** were also used to derive tentative comfort criteria that account for the relative and vibration levels, as compared with those present in current operational craft, helicopter interior noise and vertical vibration typical of routine military operation on the NASA ride quality simulator were those measured on the OH-58C, **Interior Noise and Vibration Measurements on Operational Military** Interior noise and vibration measurements on operational military helicopters and comparisons with various ride quality criteria. Responsibility: Sherman A. **Operational military helicopter interior noise and vibration** Interior Noise and Vibration Measurements on Operational Military Helicopters and Comparisons with Various Ride Quality Criteria. Front Cover.
