

The World Market for Mechanically Propelled Airplanes and Other Aircraft of Unladen Weight Exceeding 15,000 Kg Excluding Helicopters: A 2004 Global Trade Perspective

OUR APPROACH This report was created for strategic planners, international executives and import/export managers who are concerned with the market for mechanically propelled airplanes and other aircraft of unladen weight exceeding 15,000 kg excluding helicopters. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics that appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for mechanically propelled airplanes and other aircraft of unladen weight exceeding 15,000 kg excluding helicopters for those countries serving the world market via exports or supplying from various countries via imports. I do so for the current year based on a variety of key historical indicators and econometric models. On the demand side, exporters and strategic planners approaching the world market face a number of questions. Which countries are supplying mechanically propelled airplanes and other aircraft of unladen weight exceeding 15,000 kg excluding helicopters? What is the dollar value of these imports? How much do the imports of mechanically propelled airplanes and other aircraft of unladen weight exceeding 15,000 kg excluding helicopters vary from one country to another? Do exporters serving the world market have similar market shares across the importing countries? Which countries supply the most exports of mechanically propelled airplanes and other aircraft of unladen weight exceeding 15,000 kg excluding helicopters? Which countries are buying their exports? What is the value of these exports and which countries are the largest buyers? In what follows, Chapter 2 begins by summarizing the regional markets for imported and exported mechanically propelled airplanes and other

aircraft of unladen weight exceeding 15,000 kg excluding helicopters. The total level of imp
